Profile

I work on web projects that make information easier to find, read and use. My selected work includes Nyayota, an open-source legal research platform for Bangladesh, and this static Astro portfolio. My workflow includes AI-assisted development, with a focus on information structure, readable interfaces and static delivery.

Selected work

Nyayota — open legal research platform (https://nyayota.vercel.app)

Repository created Aug 2026

Personal project · AI-assisted development · MIT licensed

An open-source, statically deployed legal research platform covering Bangladeshi statutes and selected international instruments.

- Built with Next.js, React, TypeScript and Tailwind CSS.
- Statutory catalogue with section-level navigation, bilingual terminology and cross-references.
- Client-side full-text search, comparative views, citation export and source-transparency panels.

afnan0356-portfolio (https://github.com/afnan0356/afnan0356-portfolio) 2026

This website · Astro

A static personal site with a file-based content system for projects, writing, books, blog posts and documents.

- Astro with TypeScript, MDX content collections and no client-side framework.
- Dark and light themes with a persisted preference and a reduced-motion fallback.

Technologies used in my projects

LANGUAGES	TypeScript · JavaScript · HTML · CSS
FRAMEWORKS & TOOLS	React · Next.js · Astro · Tailwind CSS · Vite
WORKFLOW	Git & GitHub · Vercel · Responsive design · Accessibility testing
